

Cover Splice Manual

In case DYNAMICA rope with a braided cover breaks due to the overload, this guide can help you to repair both a rope and the cover using a simple splice method.

1. A broken DYNAMICA rope and broken braided cover.

2. Pull the rope out of the cover and splice the rope. See ex. DYNAMICA Splice instruction.

3. When the rope is spliced, it looks like this and it is time to take a look at the cover.

4. Divide the loose cover material into 6 equal parts.

5. Each part goes under 1 strand and over 1 strand.

6. Continue 3 times.

7. Cut of the ends of DYNAMICA rope and secure them with tape.

8. Cut of the white cover ends.

9. Finish with tape. Step 4-9 are repeated in the other end (see photo no. 3).

10. Pull the protective sleeve on the rope in order to protect the splice. Use DYNAMICA PRO cover, it is available in many sizes and protected with a Shield Coating.

11. When the sleeve covers the entire splice, secure it by a seizing in each end.

12. Finish with tape.
